Field Experience #1
What was the dynamic of the classroom?

- Made the students work through problems (D.S.)
- Lesson then a project, Homework
- Inclusion class, students working with each other, helping each other while teachers walked around (L.T.)
- Teacher gives students time in class to study
- Went through the homework and worked some problems then did a graphing calculator activity
- Quizes and other assessments determined the students seating arrangement
About the Students

- Diverse population of students
- Distracted students even in a small group
- Hard for students to pay attention at the end of the day
Teacher centered or Student centered

- Students were talking but not a lot about math (T.R.)
- Students did not really like group work, they liked to have the ability talk while the teacher was talking
- Students enjoyed the class because it was more open
How did they start the class?

5 minutes to come up with three class questions about the quiz. Instructions about what to do after the quiz.
